DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being unpatentable over Araki (US 5,838,494).

Regarding claim 1, Araki discloses, displaying multiple-view stereoscopic images i.e. fig. 3), including the following steps: obtaining a set of multiple view images and sending the multiple-view images to the stereoscopic image synthesizer and, then informing the view number of the multiple-view images and the horizontal display resolution and the vertical display resolution of the screen by the stereoscopic image synthesizer (col. 1, lines 5 – 10, col. 2, lines 60 – col. 3, lines 5) and forming the stereoscopic images displayed on the fiat panel display with a lenticular lens slanted at an angle (col. 2, lines 30 – 39).

Regarding claim 4, Araki discloses, wherein a lenticular lens is vertically installed or laminated to the screen of the fiat panel display, while the lenticular lens is slanted at an angle of about 9.4623 degrees (i.e. fig. 2A – 21B, lenticular lenses 201 and 211).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 – 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Araki (US 5,838,494) in view of Wood (US 6,295,070).

Regarding claim 2, Araki teaches, displaying multiple-view stereoscopic images, as discussed with respect to claim 1 above.

Araki is silent to explicitly show one or more than one photographic device, such as digital camera, can be utilized to capture multiple-view images.

Wood in the same field (i.e. fig. 1, element 16) shows the video source/video camera for capturing multiple-view images.

In view of the above, it would have been obvious to one having ordinary skill in the art at the time of the invention was made to implement such teachings for capturing multiple-view images.

Regarding claim 3, combination of Araki and Wood teaches, R, G, B sub-pixels for synthesizing the stereoscopic images (Wood; fig 1, element 41).
